Digital Transformation

Step by step towards the digital future. We can offer you our services to create an individual roadmap and plan a digitalization strategy tailored precisely to the needs of your company. Precise implementation will be based on an analysis of your existing systems, assisted by individually designed prototypes and efficient customer feedback loops. As a result, you will get a precise design of your desired system architecture as well as the accurate implementation in your systems.

Scope of Services

- Digital transformation consulting services
- Interfacing of existing systems with state-of-the-art digitalization solutions
- Cloud migration and upgrading of existing tools and applications
- Your trustworthy development partner
- General contractor for turnkey digitalization solutions

Connecting Existing Systems to the Cloud

An upgrade of your machines and systems means an upgrade for your enterprise. Good communication between people provides the basis for a successful business. An additional increase in success can be achieved by implementing communication among machines. Machine-to-machine communication, for example using OPC-UA, excels by its platform-independent design and service-oriented architecture. For existing systems, we can offer to create suitable interfaces as well as connecting on-premise systems to the cloud. Our services therefore guarantee reliable and secure data exchange among all relevant systems.

Cloud-migration and Upgrading

Your systems will be ready for the future and safe. We can upgrade existing systems to cope with the new challenges imposed by digital transformation and migrate them to the cloud on request. A code base analysis enables us to upgrade your software precisely and surgically so that the integration of the systems can be performed smoothly and cost-effectively. Along with this we are also able to improve the user experience to make migration as convenient as possible for you and your employees. Our vast and long-term experience enables us to ensure that your systems will be ready for the future without any problems and suit your individual requirements in the best possible way.

Turnkey Digitalization Solutions

Tailor-made digitalization solutions. We assist you in all phases of the development process and thereby make it possible to create fully tailored systems and solutions. In addition, we offer you our support in current digitalization issues, for example, the Internet of Things. We utilize state-of-the-art data models and algorithms to structure large data sets and represent these in a suitable format. The objective is to enhance the usability of data and thereby achieve a competitive edge for your company.

Your Trustworthy Development Partner

Peer-to-peer collaboration. It is our ambition to create a trustful and open ambience in which a productive and fair exchange of knowledge can take place. Our development teams are readily available for any question you may have and develop individual solutions at the highest quality and safety standards. We can guarantee fair transfer of knowledge so that your employees will be able to understand the system implemented and make modifications themselves if the need should arise. We offer individual consulting, training and coaching sessions by our experts on request. These sessions may take place in our training centre or on your premises. Please contact us and tell us what you need!
